

Veeva Vault R&D Services

Streamlining Research and Development
with Expert Veeva Vault Solutions

Conexus Solutions, Inc. is a trusted partner for small to mid-size pharmaceutical companies, offering expert guidance in managing various vaults within the Veeva Development Cloud. As these organizations move through early-stage development, they face the dual challenge of staying compliant with industry regulations while operating with limited internal resources.

Our Veeva Vault R&D services are designed to streamline complex operations, ensuring compliance while reducing the burden on internal teams.

Our customizable, end-to-end support is tailored to the unique needs of emerging life sciences companies. Through our partnership with Veeva and our extensive certifications, we help streamline processes from clinical trials through to product launch, allowing you to focus on advancing drug development and innovation.

Customer Challenges

Small and midsize pharmaceutical companies face distinct challenges when managing their vaults within the Veeva Development Cloud. Conexus provides a comprehensive solution that addresses these pain points, delivering both cost efficiency and scalability while freeing your team to focus on strategic objectives.

- 1. Multiple Vendors:** Coordinating between separate service providers for clinical and commercial vaults is time-consuming and inefficient, often leading to delays and miscommunication.
- 2. Limited Resources:** With internal teams stretched thin, keeping up with evolving industry standards and maintaining GxP compliance can be overwhelming.
- 3. Compliance and Validation:** Ensuring ongoing compliance with GxP regulations and performing timely validation for critical systems requires specialized expertise that many small companies lack.
- 4. Unified Solution:** A fully integrated service that combines both business and technical capabilities offers a streamlined approach, minimizing the need for fragmented services and simplifying operations.

Key Offerings

Our services are designed to meet your organization's specific needs, ensuring efficient operations and regulatory compliance.

Implementation – As part of the Vault implementation, Conexus conducts requirement-gathering sessions, documents business rules, performs configurations, and validates the system as per GxP standards. Our team also provides system user training and performs production deployment.

Data Migration – Our experienced Vault team helps process, clean, and organize clinical data as per industry standards. This service also includes the migration of data between third-party systems, such as SharePoint and Veeva Vault. We leverage our certified, validated data migration tool to ensure faster and compliant delivery.

Third-Party Integration – Conexus has extensive knowledge of business rules and has integrated and managed all the major enterprise applications used by life sciences companies. Our team can develop customized integrations between third-party applications and Veeva Vault.

Training – As a certified Veeva Partner, we have a deep understanding of the tools, processes, and business challenges it can address. Our practical experience configuring, implementing, and maintaining these solutions informs our approach and allows us to create training content that goes beyond point-and-click.

Validation – Our teams have extensive experience handling complex validation services for commercial and clinical implementations, such as ongoing application management, data migration, and third-party integrations. We also provide standard GxP documentation, including the Validation Plan, URS, IQ, OQ, and VSR.

Application Management – Once the implementation process is complete, Conexus provides ongoing application support and management services, such as release management, configuration, end-user support, and production deployment.

Empower your organization to excel in the complex world of drug development.

We'll partner with you to streamline processes and support your organization's growth and success!
